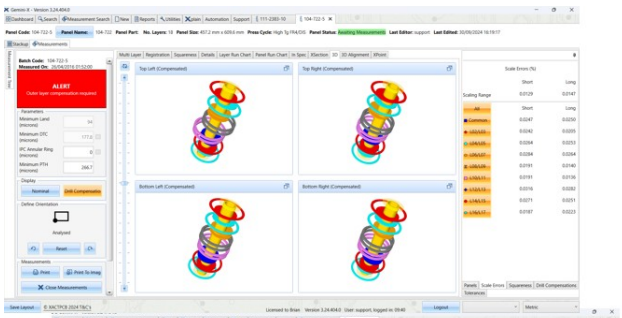
GX3 Recommended System Requirements

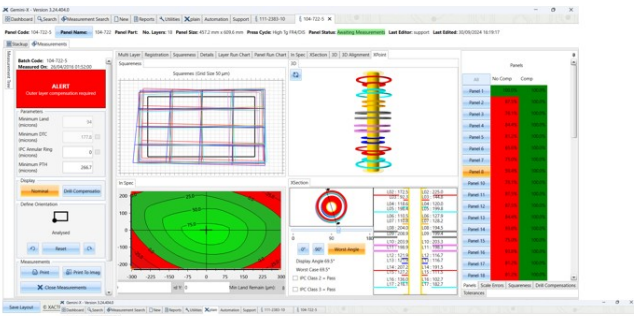
All machines must be Windows based 64 bit machines.

Recommended Server (can be a virtual machine, ideally with dedicated/allocated RAM and graphics capability)
8 core CPU
32GB DDR4 RAM
50GB SSD space (database size dependent)
Windows Server 2016/2019/2022

Recommended Client (PC or laptop)
4 core CPU (i7)
16GB DDR4 RAM
20GB SSD space
Windows 11

Network speeds ideally 500mb/s.

Monitors should be 24 inch widescreen as a minimum. The XACT screen layout has been designed for this type of display.




The above are the ideal recommendations, not the minimum. The system will run on less capable hardware, but the operational speeds will be impacted.
